PDSD HW2 Guidelines

Dear all,

Please read the following instructions regarding the preparation of HW2 carefully.

1. The "HW2_YourID.zip" has been uploaded. In this template, the naming of I/O port, top module, files, folders must strictly follow to the specifications provided in " HW2_YourID.zip." Failing to follow the template's naming rules, which leads to the TA's testbench not being able to automatically validate correctness, will result in a direct score of 0.

2. If you are not confident in naming the elements accurately, please edit the files provided in the template rather than creating new files. This will ensure that the names are correct.

3. You are not allowed to create any new .v files in the provided folders. Hence, please append all the sub-module in the top-module .v file if necessary.

4. In the Voting circuit test pattern, in case of a tie, you can ouput randomly.

   For example : Input: (001, 001, 100, 010, 010)

   Since 001 and 010 have the same count, the output will be 010 or 001, both of them are accepted.However, if your output is 100, there will be failed.

5. If you send subsequence versions after the initial submission, please add [_v2], [_v3], and so on at the end of the file name.

6. The format structure for assignment submission is as follows:

   HW2_YourID.zip
   ----- HW2_YourID /
   ----------voting.v
   ---------- median.v
   ---------- tb_voting.v
   ---------- tb_median.v
   ---------- HW2_YourID.pdf

7. Ensure that the final version is uploaded within the assignment submission deadline (by 23.59 PM on 2025/10/28 Tue.). Late submissions will incur an 80% score deduction."

8. Once again, please make sure to read the uploaded "Homework Submission Rules For PDSD" . If you have any other questions or concerns regarding the assignment, feel free to contact the TAs. Thank you.
