PDSD HW1 Guidelines

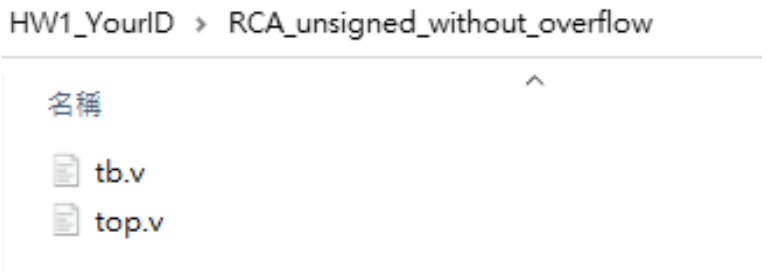

Dear All,

Please pay close attention to the following points regarding the preparation of HW1:

1. Please refer to the "HW1 Assessment Criteria" for your report writing. If you have any questions about the grading criteria, you can provide feedback through email to TAs.
2. The basic I/O names, module name, file name, folder name must not be modified in “HW1_YourID”. You are responsible for completing top.v and tb.v in the provided folders.

   You are not allowed to create any new .v designs in the provided folders. Hence, please append all the submodules in the “top.v” if necessary. Violations may result in a deduction of points.

3. Building on (2), **an unsigned RCA (Ripple-Carry Adder) without overflow detection is a fundamental design that is required for HW1**. Other designs, such as different adder architectures (CLA) and signed operations, are extra-credit items, you can decide whether to implement them or not. If you choose to implement extra-credit items, please submit them in the template format.

4. Your report should provide a detailed explanation of the basic requirements of HW1 and any additional functionalities you have implemented. Moreover, explain how to verify the circuit's functionality.
5. Utilize comments in your code to enhance code readability.
6. For other assignment submission guidelines, please refer to " Basic Homework Guidelines for PDSD". Violations may result in a deduction of points.
7. All the relevant files you need for this assignment have been uploaded in "Enter Course". If you have any other questions or concerns regarding the assignment, please don't hesitate to reach out. Thank you.
